

Penataur

CONTINUOUS SECURITY VALIDATION THROUGH BREACH AND ATTACK EMULATION

Assess your Security Posture against the Latest Threats and Identify gaps in your organization's security controls, infrastructure, and processes across the full cyber kill chain using **Penataur**, our premier security validation platform.

Penataur Validates security perimeters and network infrastructure from the **inside - out** by emulating both an infected endpoint in the network and the C&C server.

Generate immediate reports to assess whether an organization can be made vulnerable by malware such as spyware, trojans, and ransomware if they were to already exist within or infiltrate the organization's networks

Advanced Environmental Drift Analysis

Continuous monitoring of the IT infrastructure eliminates environmental drift and drives continuous validation against defensive regressions to ensure health of an organization's security infrastructure.

FEATURES:

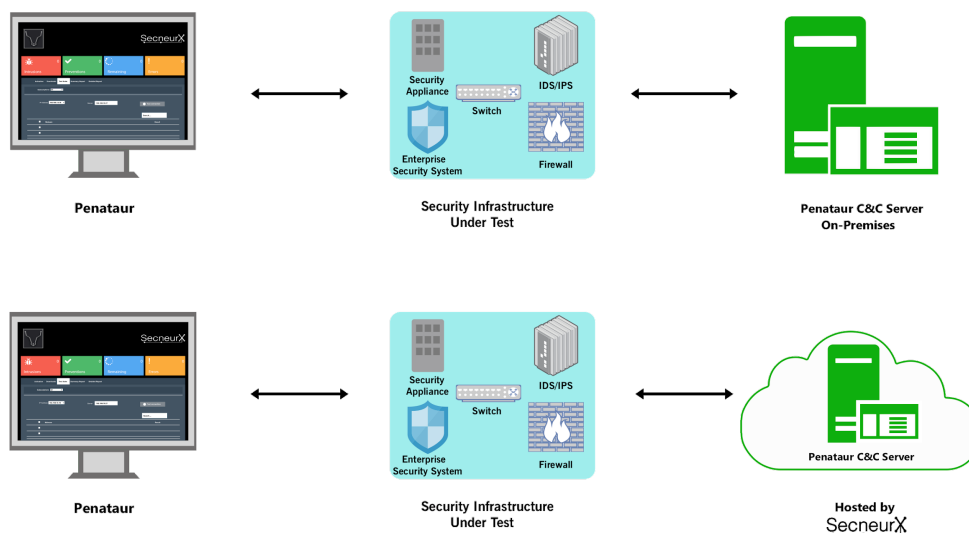

- Immediate actionable insights.
- Validate continuously or on-demand.
- Centralized orchestration.
- Shorten time to mitigation.
- Assess effectiveness of Security Controls.
- Reports for both technical and Executive staff.
- Assess readiness to detect and handle APT.

BENEFITS

- Understand the ROI offered by different security controls.
- Remediate Identified gaps to reduce your attack surface.
- Convenient single pane view of how your security controls perform.
- Identify signature less malware.

Penataur can be installed and run in two configurations:

- Penataur C&C server on-premises
- Penataur C&C server hosted by SecneurX on the cloud.

Global coverage

Emulation of the latest, active, and prevalent cyber threats.

Zero risks

Gain insight into cyber attacks to lower business risks.

Actionable insights

Gain critical intelligence specific to your organization's security infrastructure.
